

Windows 2008 Server Final
OFFICIAL VERSION 3/1/2012

The following points are provided as information while you do your exam. Steps to follow are below

- Log on to Surgient (username: **studentID**, password: **chaffey**)
- Log on to SERVER_TWO as the **administrator** with the password of **FinalExam1**
- You will not logon to SERVER_ONE. Please perform all steps below on SERVER_TWO
- As the administrator **you may need to fix problems** to get through this exercise
- **Put your name on everything!**

Please answer the following questions based on the **CURRENT** configuration of your machine and domain.

1. Write down your **Full Computer Name**:
2. Write down your IP address (Get this from your server, not from Surgient!):
3. List the computers found in the **Domain Controllers** OU:
4. Create the following user
 - First Name = **Student**
 - Last Name = **One**
 - Logon = **Student1**
 - Password= **Pa\$\$word1**
5. Do not allow the user to change their password
6. Create a global security group called **students**
7. Put **student1** in the students group
8. Create a folder called **Test** on the root of the drive where your system (Windows) files are located
9. Share the test folder with the default share name.
10. Set the share level permissions on the test folder so that the administrator account and the students group have full control, and no one else has any permissions
11. Create a text file in the Test folder and call the text file **checkthis.txt**
12. Open the **checkthis.txt** file, type your name and save the file.
13. Set file/folder permissions on the **checkthis** file so that the administrator account and students group have read only permission to the file.
14. Create a user with first name **Final** a last name of **User** and logon of **fuser**. Set the user's password to be '**F1nally**' and make sure the user does not need to change their password at next logon.
15. Create a printer named '**hpprinter**' that points to an **HP laserjet 4050 PCL** printing device on the port **FILE:(Print to File)**.
16. Do **NOT** share the printer that you create.
17. Print your Windows Printer test page and select **c:\testpage** as the file name.
18. Print your **checkthis** file and select **c:\checkthisprint** as the file name
19. Log on to your machine as **fuser**. Connect to the share **Final1** on the server **INSTRUCTOR**. Inside you will find a document. Open the document and type your name where indicated. Copy the document to **c:\page2.txt** (on SERVER_TWO). Follow the instructions on the document.
